Life on Mars?

October 12, 2010

This one will test your memory. Do you remember way back in 1984 that according to NASA scientists, a piece of Martian meteorite found in Antarctica exhibited telltale evidence of organic molecules...in essence, life. Now, apart from the issue of life on other planets, consider this strange irony. Isn't it interesting that scientists will believe that this organic compound found on a rock allegedly originating from Mars should be considered "proof of Life," while a fully developed, heart-beating, thumb-sucking baby in a mother's womb should not. Amazing!
